RADVISION viaIP MULTIMEDIA COMMUNICATION SOLUTION CERTIFIED FOR USE IN DEPARTMENT OF DEFENSE NETWORKS

RADVISION Completes Interoperability Testing By The Joint Interoperability Test Command (JITC), Certifying RADVISION Product For Use Over DoD Networks

Glen Rock, New Jersey, May 17, 2004 -- RADVISION (Nasdaq: RVSN) today announced that the Defense Information Systems Agency (DISA) JITC (Joint Interoperability Test Command) has informed the company that its award-winning *viaIP*[™] Multipoint Conferencing Unit (MCU) Platform has been certified by the Department of Defense's (DoD) Defense Collaborative Tool Suite (DCTS) for use in DoD networks. Also certified were RADVISION's iVIEW DCS data collaboration server for real-time document and application sharing and the company's newly announced ECS Gatekeeper v3.5 for robust and secure video network/call management.

Furthermore, RADVISION engineers, in collaboration with DISA and Asynchrony Solutions, defined common user scenarios which were used as guidelines during the certification process. Those guidelines will likely to be used in the future for DCTS certifications of alternative vendor's components.

"With the certification of the RADVISION MCU and DCS by the JITC, the Department of Defense and its member agencies and organizations now have access to a powerful IP-based multimedia communication platform," said Dan Garber, RADVISION's Director of Government Sales. "And, when used in conjunction with a RADVISION gateway, the platform also delivers full bridging with legacy ISDN networks and provides all the serial interfaces necessary to fully interoperate with common encryption devices such as KIV-7 and KG-194 platforms."

"JITC certification clears the way for even broader adoption of RADVISION's powerful communication solutions in government networks," said Bob Kipke, VP-Criticom, a leading government reseller of RADVISION equipment. "Interoperability is crucial to military operations and, with this certification, RADVISION will be a viable part of DoD's emerging IP networks."

Many government installations worldwide have already chosen RADVISION's award winning viaIP architecture for their video network infrastructure due to the company's solution's support of any end point (meeting room, desktop, field laptop) any protocol (H.320, H.323, SIP), over any network (IP, ISDN, xDSL, satellite, leased lines) and any media (voice, video, data).

About JITC

In 1999, Congress instructed the Department of Defense (DOD) and the Intelligence Community (IC) to address the lack of interoperability between fielded collaborative tools. As a result, the Joint Interoperability Test Command was tasked to test and certify standards-based communications products as interoperable and approved for use on the DoD network, called DCTS (Defense Collaboration Tool Suite).

The DCTS program identifies, fields and sustains a dynamic set of evolving standard collaboration tools that bridge between DoD and the Intelligence Community. The DCTS offers voice and video conferencing, document and application sharing, instant messaging and whiteboard functionality to support defense planning.

As designated by the Office of the Secretary of Defense (OSD), The Defense Information Systems Agency (DISA) Joint Interoperability Test Command (JITC) is DOD's sole Joint Interoperability Certifier and serves as DISA's Operational Test Agency (OTA). JITC is also a Major Range and Test Facility Base (MRTFB), allowing them to extend their test resources and certification processes directly to other federal government agencies, the private sector, and the nation's allies. Through the DoD Conformance and Interoperability Testing Program, JITC is ensuring that leading edge technology can be introduced into the DoD networking environment, providing maximum benefit and minimum risk. For further information about the JITC, contact the Collaboration Management Office at 703-882-1442, or visit <http://jitc.fhu.disa.mil/washops/jtcd/dcts/projects.html>.

About RADVISION Conferencing Solutions

RADVISION offers one of the broadest and most complete sets of video, voice, and data conferencing network solutions for IP and ISDN-based networks, supporting the majority of end points in the market today. The RADVISION solution features powerful multipoint conferencing units (MCUs), scalable H.323, SIP, 3G and ISDN gateways and gatekeepers, and easy-to-use management and scheduling tools for the IT manager and end user. RADVISION also provides businesses and service providers with integrated solutions that deliver converged IP-based video telephony and multimedia streaming applications to employee computer desktops, residential broadband homes, and 3G subscribers worldwide.

About RADVISION

RADVISION LTD. (Nasdaq: RVSN) is the industry's leading provider of high quality, scalable and easy-to-use products and technologies for videoconferencing, video telephony, and the development of converged voice, video and data over IP and 3G networks.
